Discussion

David Kruchek/CDPHE and Rick Caulfield/KH discussed the demolition of the 990/990A pre-treatment basins associated with the Sewage Treatment Plant (STP). These basins are 20 feet deep and are located west of the STP. A PDSR for these Type 1 basins has been approved by CDPHE pending the removal of residual sediment that remained in the basins. The sediment has been removed (see attached photo). Therefore, demolition of the basins can begin. CDPHE concurs that demolition may begin.
